Coding Challenge

This coding challenge is for people to develop a VI that can be discussed in a "show and tell" session in the next user group.

Please can anyone that participates send their code to mlug@argentaconsult.com so that we can prepare the material for the "show and tell".

The Challenge

Using the attached 1D array of string data, sort it by the last letter of each element and produce a histogram for each letter. Any questions, send them to the above address. Thanks again to the font of coding challenges, Ken McMullan, for coming up with the idea!

Challenge extension – if you're feeling the LabVIEW vibe, extend the VI to be able to sort the attached extended data set. First setup an array of clusters for the data and allow sorting of a selectable element of the cluster.

All participants will receive a prize for entering!
